DETAILED ACTION

This is the third office action for U.S. Application 10/028,834 for a Composite Linkshaft Bracket filed by Carsten Behrensmeier et al. on December 20, 2001. Claims 1-9 and 16-19 have been withdrawn, claim 11 has been canceled and claims 20-22 have been added.

Claim Rejections - 35 USC § 103

Claims 10, 12-15, 21, and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reid et al. in view of the prior art disclosed by Applicant in the specification. Reid et al. discloses a bracket with an upper portion (24a) that has a plurality of mounting holes that receive a pair of mounted studs (28), and an upper semi-circular region. The bracket also has a lower portion (24b) coupled to the upper portion that has a lower semi-circular region and a pair of inlets (any 2 of the holes that receive the bolts on the lower portion left over from the 2 mounting holes). The inlets couple with a corresponding one of the pair of mounted bolts and surround and support a shaft. The upper portion also has a plurality of raised ribbed regions (between the bolts 28).

Reid et al. does not disclose the materials used for the upper and lower portions of the bracket. Applicant discloses reinforced heat resistant aliphatic polyamide (a polymer with 30% glass fiber reinforcement) with a heat distortion temperature of 290 degrees Celsius as a known material manufactured by DSM Engineering Plastics. It would have been obvious to one of ordinary skill in the art at the time of the present

Art Unit: 3632

invention, to have used the known material disclosed in Applicant's specification, for the bracket taught by Reid et al., for the purpose of providing the bracket with a high heat distortion temperature and a specific natural minimum frequency (in this case 1080 Hertz).

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reid et al. in view of the prior art disclosed in Applicant's specification, in further view of King et al. The bracket taught by Reid et al. in view of the prior art disclosed in Applicant's specification, does not specifically disclose a metal lower portion. King et al. discloses that journal blocks can be made of metal. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have made the lower portion of the journal block taught by Reid et al. in view of the prior art disclosed by Applicant in the specification, out of metal, as known in the prior art and disclosed by King et al., for the purpose of increased strength.

Response to Arguments

Applicant's arguments filed October 21, 2003 have been fully considered but they are not persuasive. In response to applicant's arguments, the recitation "used to support a bearing supported linkshaft in a vehicle driveline comprising" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural

Art Unit: 3632

limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Applicant has

Art Unit: 3632

disclosed that plastics have been used to produce the brackets, and Applicant also has disclosed that DSM Engineering Plastics manufactures a known plastic. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have used that known plastic to form the bracket taught by Reid et al., to provide a bracket with a certain heat distortion temperature. The natural frequency is a product of the material, therefore the bracket formed by Reid et al. in view of the prior art, would also have the minimum natural frequency claimed by Applicant. The King et al. reference provides a teaching that journal blocks can be made of metal for providing strength, which when combined with Reid et al. in view of the prior art, would make it obvious to form a journal block of metal for the purpose of increased strength.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
